

How to set up your wall guide

1. Create a account (obviously)

Register

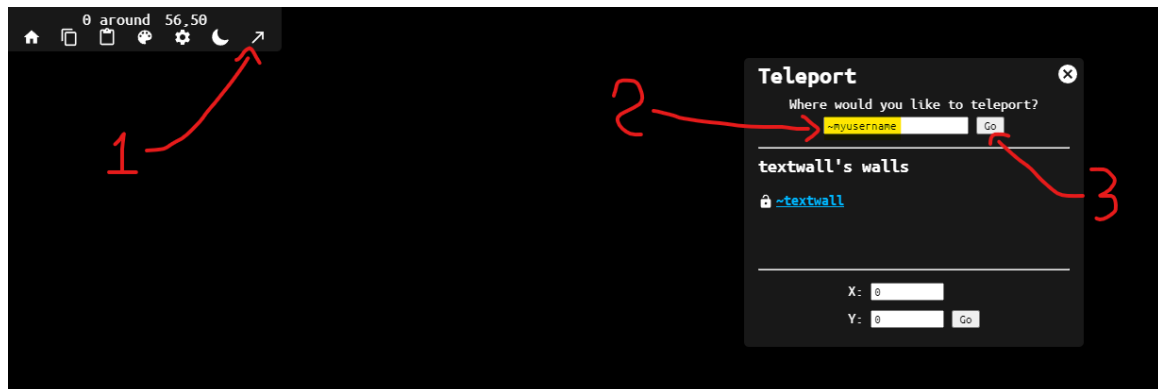

Username
myusername

Password (don't forget it)
.....

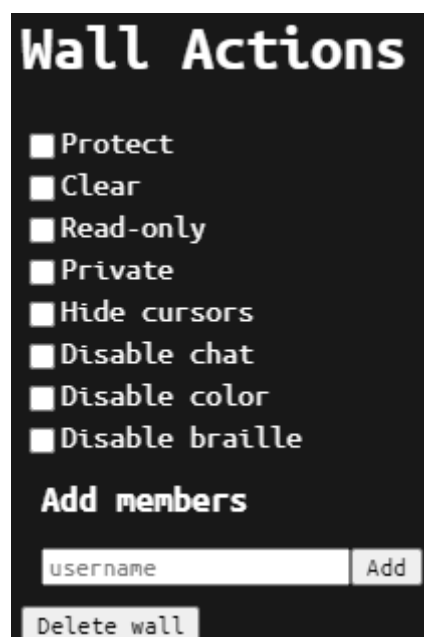

Confirm Password
.....

[Log in](#)

2. Teleport to your wall (Click ↗, Type ~, then your username.)

3. Open the Options (⚙) and scroll down until you see "Wall Actions", Configure it however you like.

Wall Actions

- ☐ Protect
- ☐ Clear
- ☐ Read-only
- ☐ Private
- ☐ Hide cursors
- ☐ Disable chat
- ☐ Disable color
- ☐ Disable braille

Add members

username

What you can do with Wall Actions:

1. Protect

Click it, then click on a chunk you wanna protect.

2. Clear

Same as Protect, but to clear a chunk.

3. Read-only

Makes it so only you and members can write on the wall, Doesn't stop people from chatting.

4. Private

Makes it so only you and your members can visit your wall.

5. Hide cursors

Hides people/cursors on your wall, but doesn't disable the Nearby counter.

(You and your members won't see cursors)

6. Disable chat

Everyone on your wall (including yourself and your members) won't see the chat, Useful if you want them to focus on the canvas instead

7. Disable color

Stops everyone (including you and your members) from using colors.

8. Disable braille

Stops everyone from using Braille characters. (Nothing will happen if they type a Braille character)

9. Add members

Add a user you want to be able to do, unlike a visitor:

Protect chunks

Clear chunks

Type even if the wall is Read-only

Be able to see your wall even if it's Private.

10. Delete wall

Tip: Make your main wall private, not delete it.

Use the button if you wanna delete a "sub-wall" (For example: if you created one on accident)

Type "confirm" to confirm that you didn't click it on accident, If you did, just don't type confirm.

If you're doing this on TextWall, keep in mind:

1. It's called "Wall Settings", not "Wall Actions".
2. There are new options (Disable octants = Disables drawing/erasing) while Dimka's TextWall doesn't have them, because it's based off a older version of TextWall
3. Protect now allows you to protect any character, not just a chunk.

Thank you for reading the "How to setup your wall" guide.
